WHITES

One of the least complicated to explain, but one of the most complicated to produce, white tea is oxidized very slightly and comes in two variations. Originally, white teas are the buds of the tea plant. This provides the tea with a fuzzy, fur-like coating, called trichomes. Bai Hao Yin Zhen (or silver needles), the original white tea, possesses a pale yellow liquor and has light notes of sweetness, reminiscent of melon. In recent years, another type of white tea has emerged on the scene: leaf style. As opposed to the very tips of the tea, they take the leaves, as with other teas—e.g., Bai Mudan (or White Peony) seen above.

Trivia

At first, the thirteen colonies procured their tea from the Dutch, tax-free. Had the British not taxed it, tea would be the number one beverage in the U.S. instead of coffee.
